Stream Imagery Guidelines

Banner Imagery

Dimensions

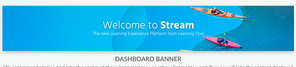
To get the most out of your Dashboard, Level and Course Banner, the best dimensions to adhere to if you want conformity across the platform for your users is to create imagery at 1920PX x 300PX.

Image Behaviour

Imagery in the banner can be made up of any design and style. Adding brand colours and styles help give the platform weight and stronger visual aid.

The banner image resizes to the dimensions of the bounding box. Any screen size below 1920PX the banner space will reduce the image height to retain the correct ratio this is to ensure the image never crops. We recommend placing text into the centre of these banner images as other alignments won't flow as well into the content displayed below the banner.

The banner will be hidden on screens less than 770px wide to allow more space for content.



DASHBOARD BANNER

We recommend placing text into the centre of these banner images as other alignments won't flow as well into the content displayed below the banner due to the banner resizing behaviour.
